

ABSTRACT OF THE DISCLOSURE

A shoe provided with an interchangeable sole includes an elevated flange (5) arranged on the longitudinal edge between the front (1') and rear (1'') ends thereof and the interchangeable sole (4) is also provided with a longitudinal elevated flange (6) extending between the front (4') and rear (4'') ends of the interchangeable sole (4) on the opposite side in an operating position with respect to the longitudinal flange of the shoe. The longitudinal flange (5) of the shoe and the longitudinal elevated flange (6) of the interchangeable sole (4) interact by shape with the corresponding edge of the interchangeable sole (4) of the shoe in the operating position which is maintained by quick-operating fixing devices (7). The invention is particularly usable for shoe articles, in particular for sports shoes.
